

Abstract

This diploma thesis addresses the measures issued in connection with the covid-19 pandemic in relation to social work in homes for users with the disability. The aim was to map the impact of anti-epidemic measures on the performance of the profession of social workers in this type of social service. The evaluation was based on the analysis of anti-epidemic measures, a questionnaire survey and interviews. The result of the research is a set of specific impacts of measures on the performance of the profession of social workers in homes for users with disabilities.
