

My diploma thesis is focused on the foundational activities of the Markvartic family which is one of the most prominent families in Northern Bohemia of its time. In terms of the investigated area and period, the diploma thesis is a continuation of the author's bachelor thesis which was focused on the foundational activities of the House of Wartenberg which had a common ancestor with the Markvartic family.

The work's focus is the evaluation of relics of preserved buildings in historical and cultural context, where their original feature was changed by later building measures. Every object will be described and analyzed using secondary literature, material and literary sources. The result of this method will be a short synthesis including the outline buildings stages of objects and their style evaluation.

This method will be applied on the background of historical contexts, which represent connections of the Markvartics and royal court and the Cisterciensis, Dominicans and Johanites Order.
