Year of defense: 2023

Keywords: breast, breast cancer, screenig, prevention, breast self-examination

Bachelor's thesis deals with girls and women's awareness of breast cancer prevention. It is divided into theoretical and empirical part. The theoretical part is focused on breast anatomy and breast development, categorization of tumors, classification. Furthermore, it points out to risk factors, symptoms, diagnostics, treatment, prevention and the role of the nurse in health education.

The empirical part contains analysis of questionnaire which was focused on girls and women's awarness of breast cancer prevention. Female students of secondary vocational school and women visiting the gynecological clinic participated in the investigation. The main aim of my thesis is to find out the level of girls and women's awareness of breast cancer prevention.
