

In the beginning of my thesis there are basic information about infertility, its reasons and a description of the two most used technics of assisted reproduction in the Czech Republic. This thesis deals with ethical issues, which are being called out by these technics. It deals with their basical listing and well-understood views on the specific issues for everybody. Furthermore it deals with the examples of the women, their solutions of infertility and touching the difference in the position of women in biblical times and nowadays society. The questionnaire probe is focused on the opinions of leaders in church curriculums, which are being related to the reproduction technics. Their view is very valuable, because they are in the positions like the authorities and lead fellowships, which they influence by their opinions. This thesis does not offer final answers and conclusions, but a base for the fact that everybody could then find further material and on their basis create their own view on this issue.
