

This work is dedicated to the history of Commendam the Knights of the Cross with the Red Star and to its hospital in the period, in which was Georg Runner functioning. He was working there in 1609-1632. I tried to put this person into connection with historical events in this region. I handle in detail about the religion circumstances in time of the biggest rapid development of Lutheranism, about conflict, which comes up between local catholic and protestant people, and about the first progress of rekatolization in Cheb, too. Another problem contains progress of economics estate of the commendam in this time. There are some property and jural conflicts for example. With economics situation are close connected the war affairs of very big importance in this time and this about is another chapter. Its place has the question of administration and common life in hospital. Authentic documents of the Knights of the Cross are the most significant resources for this work.
