

The theme of my thesis is Assistance in financial management and use of financial counselling services at the asylum houses for mothers with children. The aim of this study is to determine whether it is possible to help mothers at asylum houses with financial management. Financial literacy and the skill to manage their money of these users is very low and it is later on transmitted to their children. Social workers at asylum houses try to help and to encourage their clients in various areas of their lives. Money is not the area every client allows you to intervene in.

In my work I consider the views of particular participants on issues of financial management and through using various tools to cooperate with users to improve their financial management skills and at the end of my work I review how the cooperation worked out and succeeded.
