

Abstract in english language

In my work I want to follow up Roman maritime trade in the Adriatic sea. I would like to describe the most common cargo according to finds from the shipwrecks. If need be also from where to where the merchant ship sails. I intend to focus also on parameters of Roman merchant ships, next harbours and navigation routes. I would like to point out benefits of undersea research and it's importance for contemporary state of investigation. Than I want to describe common methods of undersea researches.

The work is divided into seven chapters. The first is handling with historical connection of shipping in this area. Second chapter is dealing with Roman trade ships, it's looks, size, capacity and wals of constructions. Third charter is the largest. It offers repertoary of ship's cargo. It divides the most common cargo into: amphorae, stone objects, other ceramics, art and craft objects, metal objects, grain and glass objects. Fourth charter is dealing with harbours and anchorages and fifth chapter is dealing with navigation routes in the Adriatic sea. Sixth charter is handling with benefits of undersea researches. Seventh charter concludes the work by descriptions of the most common methods of undersea researches. Concusion summary the knowledge gained.
