

Abstract:

This thesis deals with the settlement archeology of the Roman period in Bohemia and summarizes the findings of the Beroun settlement in this period. The work is mainly focused on processing and evaluation of archaeological research at the site Beroun – Plzeňské Předměstí, which were carried out by P. Břicháček, P. Charvát and V. Matoušek in years 1979-1981. There were unearthened settlements from the early Roman period with above ground and sunken objects. The main attention was paid to the recessed huts. The ceramic material and chronologically sensitive (metal, bone and antler) items were assessed with quantitative and qualitative analysis. The work also includes a brief description of other objects and their mutual relationships. At the conclusion of the work there is presented the importance of the settlement for Beroun area in Roman period.
