

ABSTRACT

- Title:** Basic Firearms Training for The Police of the Czech Republic
- Objectives:** The objective of the thesis is to elaborate on basic firearms and shooting technique training within the scope of the basic training course of the Police of the Czech Republic.
- Methods:** The fundamental methods used in the thesis are the data collection method, applied not only for studying literature, but also in the subsequent selection of professional experience and knowledge. Another method is the analysis method, used for expert evaluation, verification, the quantitative, material, as well as interpretative and comparative analysis. Another basic scientific method is applied, for the purpose of describing basic methodological and tactical procedures and also creating a set of preparatory training sessions. The method is referred to as information synthesis.
- Results:** The output of the thesis is creating a complex view of the issue concerning firearms training for the Police of the Czech Republic according to today's methodology, tasks and objectives laid on this education course. Despite the curriculum of the firearms training being the same for several years, there is a definite improvement and effort to draw the training closer to actual situations and operations. I find that developing methodological guides and professional publications, not only from police shooting, but also practical and defense shooting, could be very beneficial to the process.
- Keywords:** education, policeman, gun, special training, shooting, corps
